

*“An investment in knowledge pays the best interests “*

*Benjamin Franklin.*

In the past few years, World has witnessed a major change with the advancement of technology. Education sector is no exception to this. With the current scenario, education has taken a giant leap from chalk and duster to mouse and keyboard. With the help of technology, now students are learning concepts crystal clear due to availability of vast knowledge on the internet. Those traditional classrooms are replaced by the interesting video lessons with the help of technology. Teachers around the world are now collaborating and learning the best methods of education from one another.

Let us recall as to what Charles Darwin has to say about being adaptable to change: “It is not the strongest of the species that survives, nor it is the most intelligent that survives. It is the one that is most adaptable to change”. Every person has the basic capability to be adaptable — without which we would not be able to function in this world. Embracing change is better than resisting it. Helping students say ‘yes’ to challenges, showing a positive attitude and keeping an open mind would go a long way in helping them grow and transform to become better versions of themselves.

So always strive to be better and better and be an accomplished human being .
